Hello
I check and compare my HAT with your HAT, this status means the firmware been cleared ,

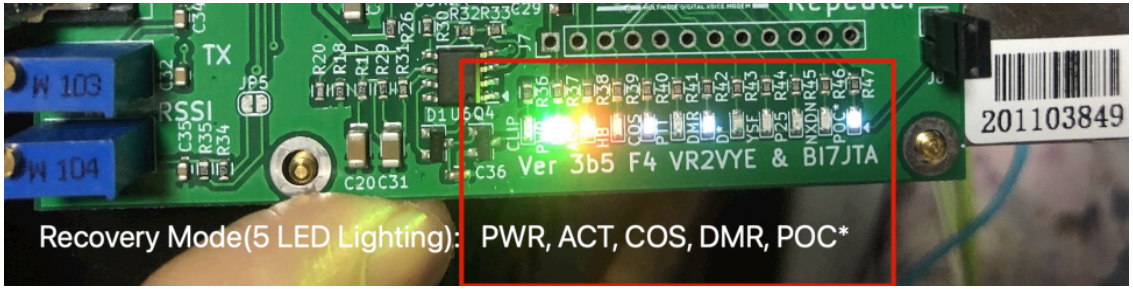

Please follow this flash the firmware,

1, Enter recovery mode, (Hot plugin, do not disconnect power , Do NOT make a wrong GPIO order, otherwise will burn MMDVM)

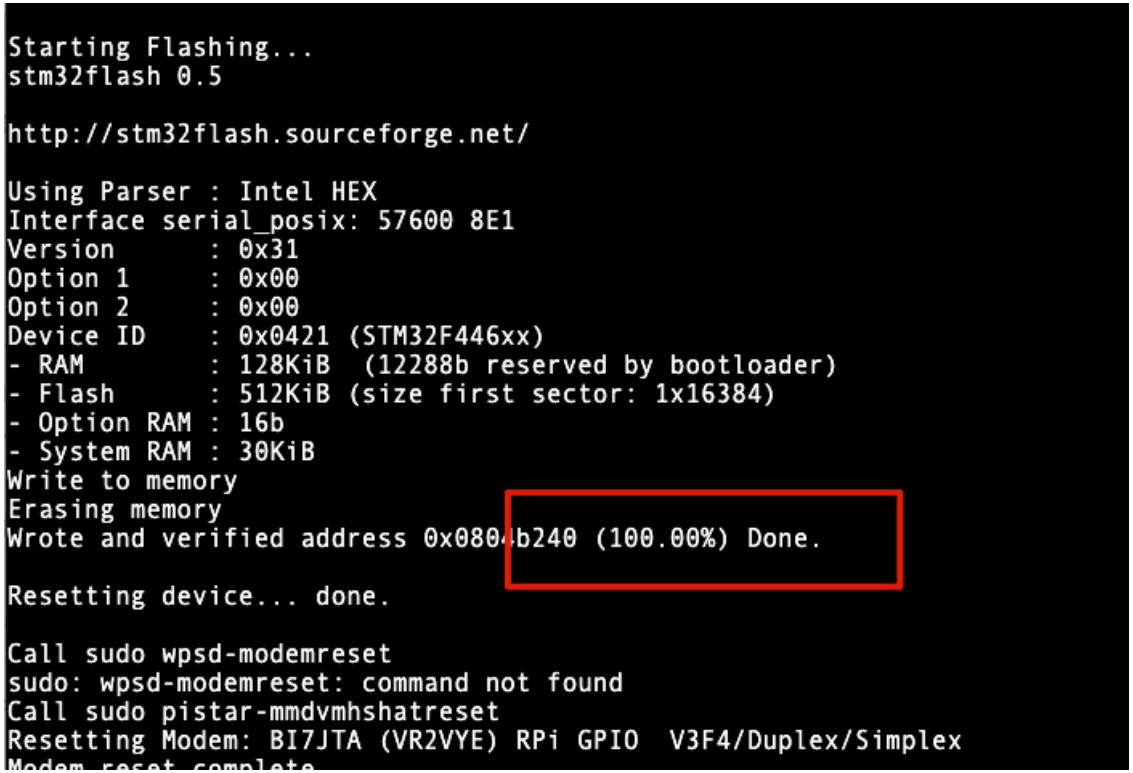

Demo: https://youtu.be/WkcZIsJeysc?si=YMZdycyB-5kgBJ4E

2, Run script, **just need to copy and paste, use mouse right click** (Not need to download script)

> sudo curl https://www.bi7jta.org/files/MMDVM_Firmware/repeater_HAT/reboot_flash/2.booto_upgrade_repeater_Baud115200_troubleshoot_freezing-build20251022.sh | sudo sh

Demo https://youtu.be/0tvvj3_SluA?si=N0ijLBw0y8R6TvuX

3, after flash 100%, disconnect BOOTO jumper, power off and on raspberry pi.

Good luck .
